

WIRE
BY DESIGN

GRILLE

The flattened wires in **GRILLE** create a reflective surface for sunlight or spot lights to highlight and bring attention to this woven pattern. The opening size and wire diameter have been carefully selected to allow for easy curving of the mesh. This feature is often employed in railing infill applications. Finding the right edge condition is simple with **GRILLE** whether using a brushed finished frame with mitered corners, a simple hem to be integrated into a railing system, or let us debur the wire ends and leave the edges exposed.

At Wire By Design, the possibilities are only limited by your imagination. In addition to the designs featured in our product specifications, we can customize a wire mesh to your particular project needs.
